

HYBRID CLOUD MANAGEMENT

Vistara drives digital transformation by extending IT operations capabilities across datacenter and cloud.

By 2020, IDC predicts that 60% of all IT infrastructure spend will be cloud based. As an IT leader, how do you manage hybrid clouds without sacrificing availability, compliance and security?

That's why you need Vistara. Vistara ensures that your critical cloud services are working to your full advantage. And without additional investment in expensive point tools.

EMBRACE CLOUD WITH CONFIDENCE

UNIFY ASSET MANAGEMENT

- View IT assets across hybrid infrastructures in a single interface. Achieve visibility and control across physical, virtual, and cloud applications with Vistara.
- Manage cloud resources with auto-discovery and hands-free administration of monitoring templates.
- Choose the AWS resources you wish to manage with Discovery profiles. Create schedules based on how fast your AWS environment is changing.

MONITOR YOUR CLOUD SERVICES

- Discover and monitor not just AWS compute and storage resources but other AWS services like CloudFront, DynamoDB, ElastiCache, Kinesis, Lambda, RDS, SQS etc.
- Track uptime and response for business services hosted on public clouds with synthetic monitoring.
- Consolidate alerts and incidents from other monitoring and ITSM tools for unified management.

DELIVER HIGH APPLICATION AVAILABILITY

- Understand how different workloads are performing across your IT environment. Stream CloudWatch logs and alarms into Vistara for effective monitoring of AWS resources.
- Build service maps for applications hosted across multiple AWS resources. Ensure situational awareness with custom metrics for service level monitoring.
- Maintain availability by routing issues to the right teams using alert escalation policies.

ANALYZE YOUR CLOUD SPEND

- Track how business units are consuming cloud resources. Access cost analytics for AWS services across different business groups.
- Access your AWS yearly and monthly spends, month-to-date spend by AWS service, month-to-date spend by AWS region, and month-to-date spend by AWS tag for specific business units or services.
- Gain control over costs by detecting unused and underutilized instances.

DRIVE ACTIONABLE INSIGHTS

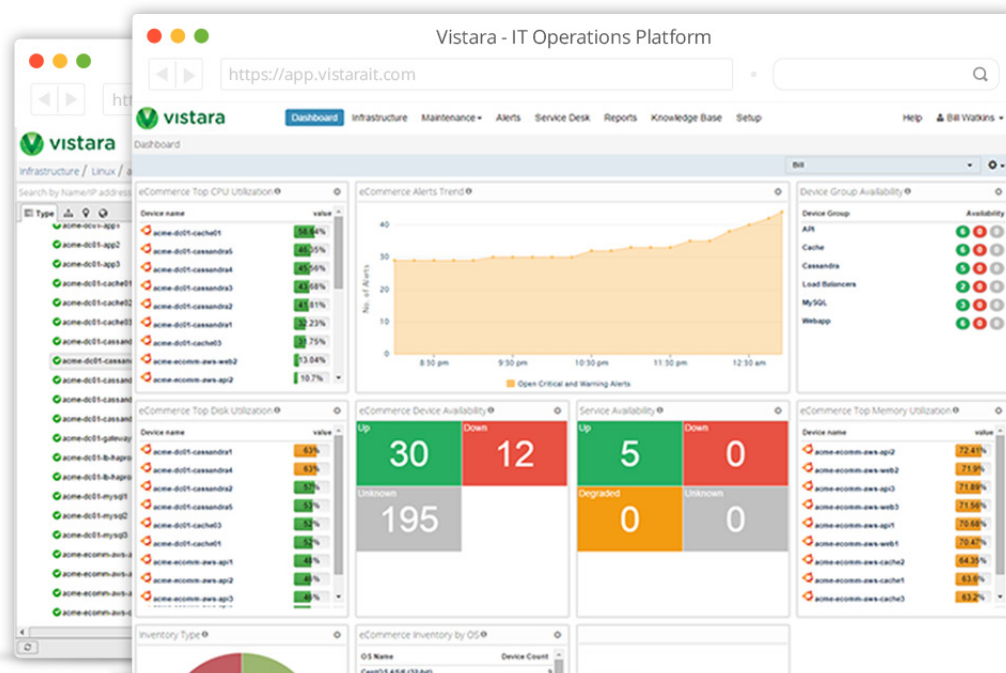

- Collect metrics, alerts and maintenance windows for AWS resources. Measure, meet and exceed service levels for business services.
- Define widgets to track business service availability. View CPU, memory and disk usage for a service, whether it's built using AWS or private clouds.
- Visualize the health of hybrid services with custom dashboards. Achieve a single source of contextual truth with reports.

MAINTAIN COMPLIANCE

- Manage access to public clouds through remote consoles. Playback recordings deliver audit trails for anyone accessing public clouds.
- Ensure consistency of IT policies with patch management. Maintain desired state of your IT assets by approving and installing patches, no matter where your servers are.
- Gather diagnostic information for alerts or auto-remediate incidents across hybrid clouds with runbooks.

Drive Enterprise-Wide Visibility, Productivity, and Business Relevance With Vistara

The cloud offers unlimited possibilities for your business. But before you can realize them all, you need Vistara. This is where modern IT begins.

About Vistara

Vistara's IT operations management cloud changes enterprise IT operations from a cost center to a value-creation engine. By providing a contextual view of any IT environment, dynamic management of policy-based automation, and a shared services approach across business units, Vistara is the leading choice for modern IT operations management.
